Experiment -1

AIM: To create an AWS free tier account to provision the resources.

Description: AWS (Amazon Web Services) is a cloud platform that offers the availability of on-demand computing storage networking, database, and applications services. AWS Free Tier account the AWS Free Tier allows a new customer to create an AWS account and try out the AWS cloud services without pay during the first months, given the free plan selected. New accounts can get an AWS Free plan that includes USD 100 instantly and up to USD 100 more during the onboarding process as sign-up incentives; the Free plan is valid for up to 6 months or until the credits are used up. You also get access to over 30 "Always Free" AWS services.

This account is created to work as a platform to provide resources like an EC2 virtual machine, S3 storage bucket, Lambda function, RDS database, a simple web application and so on. The user needs to have a valid email id, mobile number and a payment/identity verification method if asked by AWS before creating the account. AWS says that a credit card is not required to get started for most new customers though eligibility and regional requirements apply.

Prerequisites:

- A valid email address not already in use with another AWS account.
- A mobile number that will receive an OTP for verification.
- A secure password for the AWS root user.
- Details about your payment or identity verification, if AWS asks for them during signup.
- A web browser and internet access.

Steps:

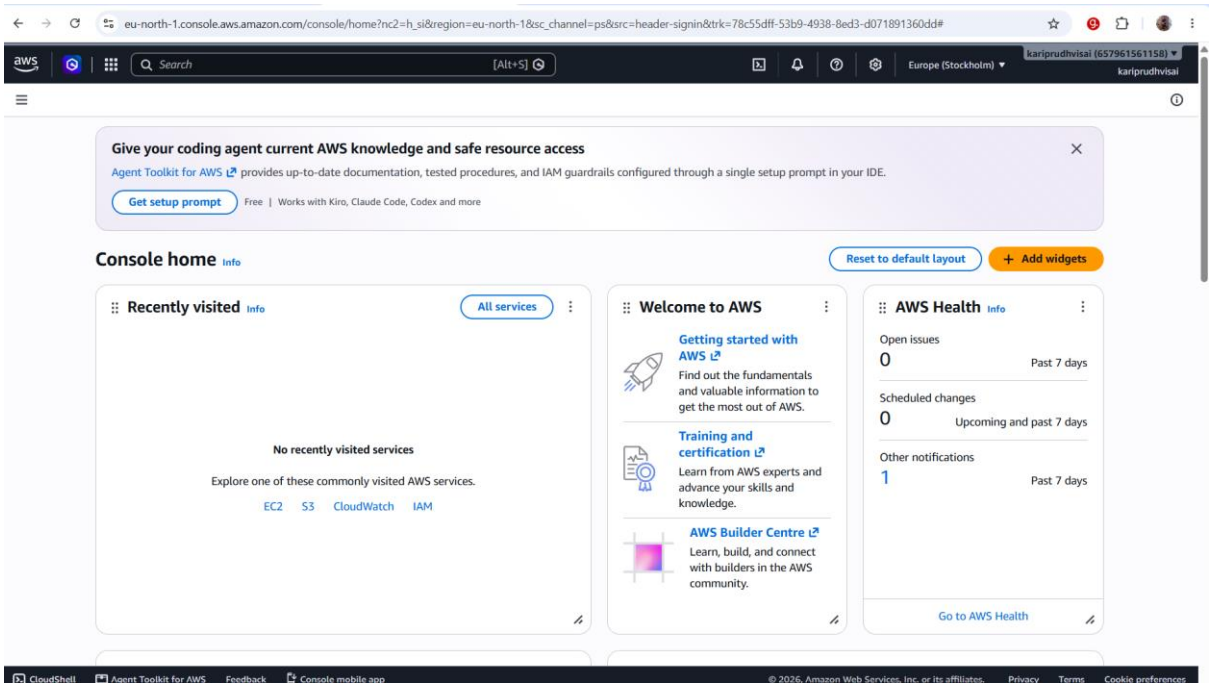

1. **Open the AWS Free Tier page:** Click on the link AWS Free Tier: https://aws.amazon.com/free/ this page also includes details of free offers as well as a button to open an account.
2. **Click "Create free account":** Choose Create free account or Sign up for AWS. AWS will now be sent to the account registration page.
3. **Enter root user email and account name:** Enter a new email address and a unique AWS account name like kariprudhvisai . The email ID becomes the root-user email and is used for login as well as account recovery.
4. **Verify the email address:** AWS will send you a verification code to the provided email. Enter the code on the signup page to verify the email's ownership.

5. **Create a root-user password:** Create a complex password that includes upper and lowercase letters, numbers, and special characters. Make sure you keep your root password safe as the root user has complete admin rights to your AWS account.
6. **Choose the account plan:** Free account plan choose a Free account plan for learning, testing, and proof of concept. The Free plan includes free credits and doesn't incur charges unless you choose to change to a Paid account plan.
7. **Provide contact information:** Name your demand country phone number and correct address. Use Personal if your demand is meant for own use or Business/Professional if your demand is meant for organization.
8. **Complete payment or identity verification:** card, UPI AutoPay or doc for verification, as per country and eligibility. It is used to verify your account only, for Free plan, you aren't deducted anything until you upgrade to Paid plan.
9. **Verify the mobile number:** Input OTP received via SMS or voice call. This establishes user validation.
10. **Select the support plan:** Select the Free Basic support plan that is required for the students and the starters. And finally, do the registration.
11. **Sign in to the AWS Management Console:** Once your account has been activated, access https://console.aws. Amazon.com/. Sign in as your root user and navigate to the AWS services.
12. **Secure the account:** Enable Multi-Factor Authentication (MFA) for the root user, create an IAM user for daily work, and configure an AWS Budget or billing alert. These actions reduce security and accidental-cost risks.
13. **Provision resources:** In the AWS Management Console, navigate to the service you need for a virtual server, select EC2; for objects, select S3; for a managed database, select RDS; for serverless, select Lambda. Choose a region, set up the resource, verify the configuration, and deploy.

Output:

After successful account creation:

- AWS confirms that the account has been successfully created.
- The user accesses the AWS Management Console.
- The account is credited with USD 100 in Free Tier credits right away, and potentially up to an additional USD 100 in credits by performing qualifying onboarding activities.
- The user can assume roles to gain access to AWS resources and services and allows the user to create and manage resources like EC2, S3, Lambda, and RDS.
- The Free account plan is valid for 6 months or until the credits are exhausted, whichever is earlier, if the user does not upgrade to a Paid plan.
- For EC2 example, this output shows a virtual machine running with public IP address, security group, key pair and state of instance as Running.
